

Get a Low-Cost, Rodent-Resistant Compost Bin

To make it easier for consumers to compost kitchen scraps and yard wastes, the Town of Middleborough will be offering one of the most commonly available compost bin, the “Earth Machine”. This holds 10 cubic feet of material, easy to assemble, rodent-resistant and allow for efficient aerobic composting. They are made from a minimum of 50 percent post-consumer recycled plastic.

An average household can compost between 500 and 1,000 pounds of organic material each year in one of these bins, producing a rich soil supplement out of material that would otherwise be thrown away. These bins retail for between \$80 and \$120, and **are available at the Middleborough DPW this spring, at subsidized prices of \$25.**
